

In the Specification

The specification has been amended as follows:

Amend the specification by deleting the paragraph beginning at page 8 line 11 and replacing it in its entirety with the following two paragraphs:

As can be seen in Fig. 2, markings are provided on the sidewall 30 at locations marked with reference numbers 88, 90, 92 and 94 to indicate the functions that the mortise lock will perform when screws are installed in the corresponding locations. Function numbers are used to identify the functions. Reference number 88 refers to the function number markings "05," "37," "38" and "85." Reference number 90 refers to a second group of function numbers, "13," "36" and "87." Reference number 92 refers to a third group of function numbers, "04," "06," "13," "17" and "31." Reference number 94 refers to a fourth group of function numbers, "17," and "31."

The function numbers at 88 indicate conventional functions that may be performed when the latch retract lever, lock/unlock lever and spindle hub are free to operate normally. Functions "36" and "87" marked at 90 correspond to the disabling of the latch retract lever 62 by blocking element 86 installed in opening 72 as described above.
